

COUNCIL MEETING – 26 SEPTEMBER 2019

QUESTIONS FROM MEMBERS OF THE PUBLIC

a **Rose Pryce to Councillor Burgess, Executive Member for Health and Social Care:**

The dangers of EMF radiation from wireless technology have prompted the U.K. towns of Glastonbury, Frome and Totnes to apply the Precautionary Principle and halt the roll out of 5G. (The cities of Brussels & Geneva have done the same and there are many other worldwide campaigns to stop it). With zero studies to prove that 5G will be safe and considering its Duty Of Care, why isn't Islington Council also putting the health of its community - particularly our children - first?

b **John Hartley to Councillor Webbe, Executive Member for Environment & Transport:**

I was shocked to discover that Islington does not provide a food waste recycling service to many flats, including for example, Xchange Point in Market Road. Modern, gated, plenty of ground level storage areas, with a regular refuse and recycling service – this large block of flats does not have a food waste communal collecting point because Islington will not provide a collection service. Why does Islington fail to provide a food waste recycling service to 75% of its households?

c **Richenda Walford to Councillor Webbe, Executive Member for Environment & Transport:**

There are many items that can be recycled in Hornsey Street but to do so you have to arrive in a polluting motor vehicle. Arrive at the recycling centre on foot or bike and you will be told to take your recycling away and arrange for a motor vehicle to collect it. Why does Islington discourage zero-carbon journeys in this way?

d **Talia Hussain to Councillor Webbe, Executive Member for Environment & Transport:**

The draft Transport Strategy says that Islington will investigate the elimination of parking permits for diesel & petrol vehicles by 2030. At the same time, the target for privately owned cars is over 30,000, which suggests that Islington could see 30k electric vehicles on the streets by 2030. How many vehicle charging points will this require on our streets, how much will this cost and how will they be paid for?
